

## ONE PIECE GRIDS

---

### DESCRIPTION:

When a building's interior or exterior design calls for intersecting architectural lines, there are several options to consider: **factory-fabricated intersections**, **notched intersections** and **one-piece grids**.

One piece grids are factory fabricated to order and are a great choice when the project requires repeating patterns, intersections in close proximity or extreme angles. One piece grids are convenient, a great time saver and have perfect cut angles that cannot be matched in the field.
